Issy-les-Moulineaux, France, 29 August 2011

Keynectis Receives CSPN Security Certification for its Solution Dedicated to the Secure Archiving and Traceability of Gaming Transactions

Keynectis has obtained First-Level Security Certification (CSPN) for its electronic storage solution, the K.EEP® digital vault.

This certification, issued by the French Network and Information Security Agency (ANSSI) validates the high level of security and reliability of the K.EEP® digital vault.

Three different K.EEP® deployment scenarios have been CSPN certified:

- The SaaS model hosted in Keynectis secure datacenters
- The traditional licensed product model hosted directly by the license holder
- The SaaS model, hosted by a third party for multiple customers (Cloud Computing approach).

The K.EEP® digital vault is the only solution of its kind that has received this level of certification for the three different deployment scenarios.

In order for operators to obtain an online gaming license in France, they must implement CSPN-certified solutions for archiving/escrow and data traceability.

More than 15 licensed online gaming and betting operators in France already rely on the K.EEP® digital vault.

With its three deployment scenarios, Keynectis will also be providing its solution to operators in other European countries with new online gambling regulations, including Denmark and Spain, in 2011-2012.

"Following the level EAL4+ Common Criteria Certification of our Sequoia® PKI software suite, this latest certification once again demonstrates our ability to deliver software of the highest level of security. A highly-secure storage solution, K.EEP® completes our range of products dedicated to secure electronic exchange, enabling us to provide customers with a complete and global solution" said Thibault de Valroger, Director Marketing & Business Development, Keynectis.

About Keynectis: Keynectis is a software and SaaS provider, fully focused on Information Security Technologies. Pioneer of Cloud Computing, with more than 12 years of experience, Keynectis provides governments, financial institutions and enterprises around the world with a wide range of products and services for managing digital identities and securing electronic communications and documents. With over 25 million digital identities protected each year, Keynectis is European leader in Information Security Technologies.

M. Thierry Dassault is Chairman of the Board.

July 2011, Keynectis acquired OpenTrust, leader in trusted infrastructure solutions for enterprise and government.
