Keynectis Reinforces its Presence in Digital Vaults for Online Gaming

As part of their online gaming legislation, Spain and Denmark have, like France, adopted a system governed by a National Regulatory Authority (CNJ in Spain and DGA in Denmark) to ensure the traceability of online gambling activity.

This type of system, commonly referred to as an electronic safe or digital vault, is used to make and keep a reliable copy of all transactions between the players and the operator. The national regulatory authorities can therefore process this data in quasi real time as it becomes available or at the end of a day's activity for example.

Keynectis, a recognized and trusted third party, offers online gambling operators an off-the-shelf packaged solution, K.KEEP®. Available as *Software as a Service* and fully operated by the Keynectis team, K.KEEP® combines a secure digital vault and audit module. Features include signature, encryption and time stamping of archives as well as functions for extracting data when required to do so by a regulatory authority thus proving the transparency of the gaming operations.

To partner customers in the opening of regulated markets, Keynectis has ensured compliance of K.KEEP® with requirements both in Spain and Denmark. As a result, K.KEEP® was certified in December 2011 by GLI for the Spanish market and validated as compliant by the Danish regulator. The first licensed gaming operators were, as a result, able to begin their activities at the very beginning of 2012.

These compliances complement the French CSPN certification, already awarded to K.KEEP® validating both the security of the system and its compliance with national requirements. The high reliability of K.KEEP® has been proven through daily operations which now exceed over 300 million documents processed in France alone.

In addition to Denmark, France and Spain, German market is going to be regulated in 2012 and Keynectis will have a compliant solution for this market in the next months.

Keynectis will be exhibiting on booth number 6740 at this year's ICE TOTALLY GAMING exhibition from 24 to 26 January in London.

About Keynectis: Keynectis is a software and SaaS provider, fully focused on Information Security Technologies. Pioneer of Cloud Computing, with more than 12 years of experience, Keynectis provides governments, financial institutions and enterprises around the world with a wide range of products and services for managing digital identities and securing electronic communications and documents. With over 25 million digital identities protected each year, Keynectis is European leader in Information Security Technologies.

M. Thierry Dassault is Chairman of the Board.

July 2011, Keynectis acquired OpenTrust, leader in trusted infrastructure solutions for enterprise and government.
